

## Maxillofacial surgical procedures

### Corrective Jaw surgeries:

Corrective Jaw surgeries can correct minor & major skeletal & dental irregularities.

Main goal of corrective Jaw surgery is to correct the Facial disharmony and give the patient a near normal appearance.

Corrective Jaw surgeries can have a dramatic effect on many aspects of life.

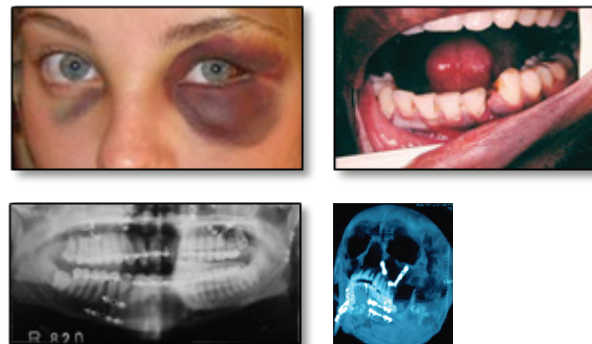

Having trained in Belgium, exclusively for correcting facial deformities, Dr Ranjit Kumar has a vast experience in this field.

### Facial Soft tissue aesthetic Procedures:

We also expertise in performing various facial aesthetic procedures like eye brow tightening, lip thinning, scar revisions etc

### Facial Trauma

The leading cause of facial trauma in our country is motor vehicle accidents & interpersonal violence. Facial injuries have the potential to cause disfigurement and loss of function; for e.g. blindness or difficulty in moving the jaw can result.

We are well trained to treat these injuries with latest techniques to help in early resumption of function with regular diet with the best equipment available.

### Wisdom teeth Removal

Not all impacted wisdom teeth need to be removed. Wisdom teeth are advised extraction for various reasons like Infection, Pathology (cysts, tumors), risk of damage to adjacent teeth, Chronic pain or discomfort, crowding of teeth.

Extraction of these teeth are performed as a day today procedure under local anaesthesia in our setup.

### Restricted mouth opening:

Restricted mouth opening can occur mainly due to Temporomandibular joint(TMJ) ankylosis or Oral submucous fibrosis.

TMJ ankylosis is a defect where in the patient cannot open the mouth due to fusion of the TMJ due to mainly trauma. Surgical release of the joint is the treatment of choice in these patients.

Oral Submucous fibrosis is a condition linked to oral cancers and is associated with areca nut chewing, the main component of betel quid. Patients suffering from this condition will have difficulty in opening the mouth, severe burning sensation of the oral cavity, reduced tongue movements etc. We at Confydentz are well versed in the management of these conditions efficiently.

## Maxillofacial Tumors

Various Maxillofacial tumors like Ameloblastoma, Odontogenic keratocyst, skull base tumors, salivary gland tumors etc affect the head & neck region. These pathologies lead to aesthetic as well as functional compromise to the patients affecting their day today life. We are very competent enough to manage such pathologies with least morbidity.

## Maxillofacial infections

Maxillofacial infections occur mainly due to decayed tooth or periodontal abscess. They sometimes present as hospital emergencies. Removal of the source of infection and establishment of adequate drainage for elimination of the purulent material is the mainstay treatment. We at Confydentz routinely treat such infectious conditions very efficiently.
