Smile makeover: Reinventing your smile 😊

A smile makeover is the process of improving the appearance of smile through one or more cosmetic procedures like:
1) Dental Implants
2) Teeth whitening
3) Dental veneers

At Confydentz Dental Hospital we have a very qualified Cosmetic dentist who can redefine your smile.

Dental Implants:

Dental implants are inserted into your jaw bone and act just like the tooth roots of your natural teeth. With this procedure, healthy adjacent teeth are left untouched.

Dental implants offer you many advantages:

<table>
<thead>
<tr>
<th>Duration</th>
<th>Replacement on dental implant</th>
<th>Replacement on existing teeth (Bridge)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Many years with the right care</td>
<td>Approx. 5-20 years</td>
<td></td>
</tr>
</tbody>
</table>

Healthy neighboring teeth need to be ground down

Keeping new teeth clean

Risk of tooth decay/fracturing

Dr Ranjit holds Fellowship in International Congress of Oral Implantology. He has a vast knowledge in rehabilitation of missing teeth with dental implants.

Tooth whitening:

Tooth whitening can be a very effective way of lightening the natural color of your teeth without removing any of the tooth surface. Your dental team will be able to tell you if you are suitable for the treatment, and will supervise it if you are suitable Laser whitening. 'power whitening' is the latest advancement and we at Confydentz can offer this depending on the case.

Dental Veneers:

Dental veneers (sometimes called porcelain veneers or dental porcelain laminates) are wafer-thin, custom made shells of tooth-colored materials designed to cover the front surface of teeth to improve your appearance. Porcelain veneers are a very successful option in many situations where the original tooth has developed poor color, shape, and contours. It is also a good choice for fractured teeth, gaps between teeth, and in some situations where the tooth position is compromised and there are minor bite-related problems. We have a highly qualified consultant who expertise’s in smile designing using Veneers.

Single sitting Root canal:

RCT is one name that gives many patients shivers when told about it. However, in reality, it is not that bad. Infact, it is an instant pain reliever and the best treatment to retain the original teeth. There are two ways to get relief from the pain: perform the root canal therapy, or pull the tooth, clean the gum below, and replace the tooth with a denture or bridge. We at Confydentz advice removing teeth as a last resort and advice to save the teeth by RCT.

Bad Breath:

Halitosis or chronic bad breath is a condition in which a person emanates an unattractive odor from their mouth. True halitosis is a persistent smell that does not go away after brushing, flossing and rinsing. It can be demoralizing and embarrassing, so much so that many people are reluctant to even mention it to their dentist. But it's also fairly common, and thus, quite treatable. Visit your dentist at Confydentz to find a solution for your bad breath. Don't be afraid or embarrassed to share your secret with us. We will most likely be able to diagnose and treat the cause of your breath issues.
Gum Diseases:

Gingivitis is the mildest form of periodontal disease. It causes the gums to become red, swollen, and bleed easily. Gingivitis is often caused by inadequate oral hygiene. Gingivitis is reversible with professional treatment and good oral home care. Untreated gingivitis can advance to periodontitis. Factors that may contribute to gingivitis include, diabetes, smoking, aging, genetic predisposition, systemic diseases and conditions, stress, inadequate nutrition, puberty, hormonal fluctuations, pregnancy, substance abuse, HIV infection, and certain medication use. A professional cleaning by your dentist or dental hygienist is the only way to remove plaque that has built up and hardened into tartar. By scheduling regular checkups — twice a year — early stage gum disease can be treated before it leads to a much more serious condition.

Children dentistry:

Baby teeth are very important to your child’s health and development. Baby teeth help children to do the following:
- Chew food easily and properly
- Speak more quickly and clearly
- Hold space in the jaws for permanent teeth that are growing under the Gums.

Baby teeth are just as prone to cavities as adult teeth. In fact, more than 50 percent of children will be affected by tooth decay before age five. You can help keep your child’s teeth healthy by teaching them proper oral hygiene from a young age and a regular visit to dentist. We at Confydentz, have a dedicated specialist who treats only children for their teeth problems.
